FOR IMMEDIATE RELEASE

Focus Performance Systems, Inc. Announces Release of Decision Focus® 7.0 Software

Minneapolis, Minnesota – September 1, 2009 – Focus Performance Systems, a leading provider of management consulting, training and performance management products and services, today announced the release of Decision Focus® 7.0 software.

The new software is designed to give users quick, easy access to the Decision Focus suite of decision making and problem solving processes and tools. The 7.0 version offers increased performance capabilities across all Decision Focus processes, plus new features not found in previous versions.

“This software takes Decision Focus further by giving users more features, more versatility and more export options” said Dave Osgood, Senior Partner. “Decision Focus has been adopted by thousands of business professionals globally since its introduction in 1985. The new 7.0 version contains improvements in every Decision Focus process, plus new document linking and attachment options, enhanced Decision Analysis capabilities, new graphical tools and a new Executive Summary export feature.”

The software is a key part of the Decision Focus decision making system. Decision Focus principles and tools are learned in instructor led classes, live web classes or through the Decision Focus Self Study System. Executive coaching services are also available for leaders and management teams involved in high stakes decision situations.

The company is offering special introductory offers for new licenses and upgrades. For more information, call 888-21-FOCUS, or go to www.FocusTools.com.

About Focus Performance Systems, Inc.

Focus Performance Systems helps leaders improve business performance through the use of structured processes for strategic and tactical decision making. The FOCUS decision making models are learned in instructor led classes, live web classes and self study programs, and are supported by FPS employees and partners in the USA, Canada, Europe and Australia.
